

How to Control Fall Armyworm Using Fawligen in English (USA)

Pest control

As part of integrated pest management approaches, fawligen causes larvae to become sick and die. However, fawligen preparation requirements include measuring device water, personal protective equipment and knap sack sprayer.

Equally, one needs 4 tanks of fawligen solution to cover field of 70*60m. Put on personal protective equipments, fill sprayer tank half of it with clean water and shake fawligen bottle well and measure 10ml of fawligen and add to sprayer tank and finish filling sprayer with water and close.

Clean measuring devices after use of near the water sources however add mix solution in sprayer by stirring with a nozzle until they mix. Hold nozzle at consistent height and spray directly into wall of plants and spray until the sprayer is empty and wash the tank nozzle and the personal protective equipments.

Furthermore, wash hands with water and soap and do not allow people to enter field until it is dry and finally re-scout field after a week and repeat spraying for 3-5 weeks.
